

Model 1050HF Grain Bagger

The Solution To Your Grain Storage Needs!

FEATURES:

- **New manual brake system**
 - No need to run the tractor hydraulics while bagging. (While the new brake system is an independent system, tractor hydraulics are still needed for the two operating cylinders.)
- The tunnel has been redesigned to be longer, rounder & wider, to **accommodate longer grain bags**.
- The only bagging system with **hydraulics to lower the top of the tunnel** for quick & easy bag installation.
- **Hopper opening has been widened to 8' X 10'**
 - Easier access for incoming tractors & grain cart spouts.
 - Estimated **36% more capacity** (bu./hr.)
- **Improved seal** with less tunnel clamps.
- Bottom tray is now operated with a cable winch.
- Hydraulic control station has been relocated to **improve operator's line of sight** with the grain bag during installation.
- The only bagging system to feature a **step & full platform on both sides** of the auger.
